

ABSTRACT OF THE DISCLOSURE

An add-on safety harness for a vehicle seat having a lap belt. An elongated anchor strap for attaching vertically around a seat back has an adjustable buckle. A first pair of shoulder straps extends at an acute angle from each side of the anchor strap, and ending in a loop. A second pair of leg straps with looped ends extends similarly from each side of the anchor strap. Each shoulder strap has a roll-type adjuster device at a median position. A piece of soft material, such as synthetic cloth or lambs' wool is attached to each adjuster device for wrapping around the adjuster device, being fastened by hook and loop fastening material. In simplified arrangement, the harness has an inverted Y-shape formed from only an anchor strap and a pair of harness shoulder straps. The lap belt of the vehicle seat is threaded through the loops of the shoulder and leg straps. The leg straps can be positioned inside the shoulder strap for smaller passengers, such as children and outside the shoulder harness strap for larger passengers.
